

LED 3 Speed Controller Instructions

12V LED'S WITH BUILT IN RESISTORS

In this example, the two Red LED's will blink very slowly, the White LED will blink fast, and the Blue LED will remain constantly lit.

Thank you for purchasing the Outer Rim simple LED Plus 3 Speed Controller ! This is designed to blink LED lights at 3 different rates, or always on, depending on which orange lever nut, you connect your LED's to. There is an additional FAST TOGGLE speed that is OFF when FAST is ON, to create alternating blinking lights. Be sure to use 12V LED's with a built in resistor. You can connect a maximum of 4 LED's to any one orange lever nut (speed), for a total of 20 LED's. NOTE: Microcontroller is rated to handle a maximum of 10 Always ON LED's.

I recommend you make all of the LED connections first before applying power.

The kit includes a 5V USB wall charger and a 6' USB-C cable. If you need portability, you can order my 2000 mAh portable battery bank. Do NOT use a battery with greater than 5V 1A output

If you have questions about how to use this, you can email me at jamie@theouerrim.com

See how it works quickly by watching this video !

LED 3 Speed Controller Instructions

PIN ASSIGNMENT	WIRE COLOR	TIMING
PIN D1: ALWAYS ON	BLUE	ALWAYS ON
PIN D3: SLOW PIN D4: NORMAL PIN D5: FAST	ORANGE/WH BROWN BROWN/WH	ON 3 SEC/OFF 3 SEC ON 1.5 SEC/OFF 1.5 SEC ON .75 SEC/OFF. 75 SEC
PIN D7: FAST TOGGLE GND: GROUND	GREEN/WH GREEN	OFF .75 SEC/ON .75 SEC GROUND (NEG -)

Note: If powering your LED Controller with a portable battery pack, you must use one with a 5V – 1A output. Some of the “Fast Charger” models with outputs of 2.1A or higher, will cause the microcontroller to shut down after about 15 seconds and may damage the microcontroller. I have a compatible portable battery pack available on my website.

If you want to purchase your own LED’s, I recommend EDGELEC 12V 5mm LED’s with built in resistor. See link below.
